ACT

Access Control Technology

Access Control Technology Ltd (ACT) was formed in the mid nineties to design and manufacture high quality access control products for the security industry. Today our products are widely used by security professionals throughout Europe, Asia, The Middle East and the USA.

Our objectives are simply to provide excellence in design, manufacturing and customer service.

To understand more about ACT its products and services I invite you to read further and consider our proposition.

David Tymlin
Managing Director (ACT)

When performance counts

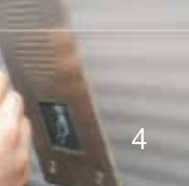

ACT is at the forefront of those companies providing innovative and cost effective solutions across the market spectrum.

technology

RFID and contactless smart card technologies have provided simplicity of use whilst dramatically increasing system performance. Our advanced controllers can handle many users with varying rights over multiple buildings and geographical regions. By embedding IP into our products, our systems can be deployed through large buildings and multiple sites without the need for major cabling infrastructure. Our high quality PC applications have exploited the system hardware to provide functional and powerful system interfaces for both the installing company and their customers.

ACT is committed to continued and expanded research and development to meet the market expectations for the future.

4

Secure, robust and aesthetically pleasing products meet and exceed market expectations.

alone

Our products are designed primarily to provide security for personnel and property alike and are deployed in both commercial and domestic systems. ACT provides seamless product solutions assuring the installer and their customers that the system parts are totally compatible.

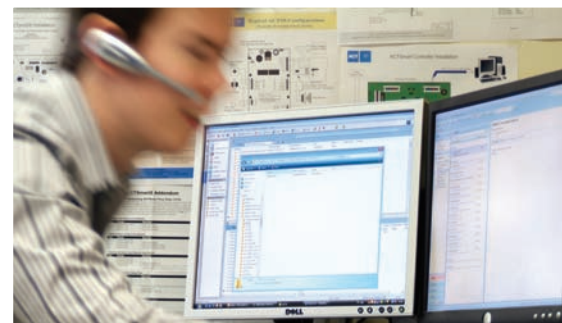

The market demands that security products be user friendly and robust whilst meeting the aesthetic expectations of architects and end users alike. ACT is recognised for products that meet these criteria.

Varying security needs call for a range of products from simple single door solutions to enterprise wide systems with open format design and interoperable capabilities. The ACT range of products more than matches these requirements.

5

Offering a distinct competitive advantage in both domestic and international markets.

Technical Support

Consultation

System Design

Technical Support

Our in-house Technical Support team offer technical assistance via telephone.

Training

A full, comprehensive and certified training programme is available for all products.

Website

Instant access to product information, installation manuals and software downloads. Visit our website at: www.accesscontrol.ie

Tender & Specification Consultation

We provide advice to installers completing a tender submission for access control or door entry.

Bespoke System Design

ACT will assist where possible to develop access control solutions that have customer specific requirements.

System Integration

The ACT application integrates with many third party applications and databases.

customers

Security companies specify and install ACT products across multiple market sectors in many different countries.

At ACT a close-working relationship with the installer and the end user helps us to ensure our products are developed in line with the needs of the market. Our extensive range of access control and audio/video door entry products are to be found in high security government buildings, leading educational facilities, multinational pharmaceutical organisations, major hospitals, well known retail chain stores, prison buildings, busy leisure facilities and private dwellings.

Our international distribution network continues to expand serving installing companies in Europe, Asia, The Middle East and North America.
