

COLOUR VIDEO

Description

Compact entrance panel with 3 pushbuttons for colour analogue video door entry systems with earphone (Monitors GEM1720D). Available with an audio control unit GEG1210, one colour telecamara with support illumination by means of high luminosity leds and a jumper to select the type of cable by which the video signal is going to be transmitted, 3 call pushbuttons and the corresponding tags, retro-illuminated by leds of easy extraction (without needing to dismount the pushbutton). The pushbutton mechanism is made up of a silicone membrane with a life utility of one million pulsations and gold-plated contacts, providing the module great robustness for weather resistance and continued use. Stainless steel pushbutton covers. Aluminium housing of 1,7mm thickness, providing great robustness. Finished in anthracite colour. Flush-mounted. Hinge mechanism for 180° opening at both sides to facilitate the installation, without screws at sight to avoid robbery. Water evacuation system that reduces to a minimum the possibility of failures due to water intrusion. Does not include flush mounted box, must order aside.
