

A World of Smarter Automation for Industry, Property and Infrastructure

The Connected Electro Smart Environment

You may already know that Electro Automation is the leading supplier, designer, installer and service providers for Security, Automatic Gates, Automatic Doors and Car Parking Control equipment.

But did you know...?

We also design, install and maintain systems for virtually every eventuality, from residential to commerce to utility infrastructure. In fact most days you probably park in our car parks, walk through our doors, use our intercoms to open our automatic gates or are stopped by our traffic control barriers.

Chances are that the buildings you visit may have an access control system by us, have window actuators that automatically ventilate the building installed by us, or have people and traffic counting systems by us.

If you didn't know all of that, we bet you also don't know that when you use a toll tag, then it was also probably one of ours, as well as the back office system that manages the system! We won't even mention the things that you are not meant to see such as our camera systems that can record number plates (even at high speed), loop detectors that can count, and classify how many vehicles travel on our roads, or loops that weigh trucks as they drive at speed along a highway!

The point is, you may know Electro as being good at one thing, but in reality we have many products that we may be able to help you with. Our unique skills allow us to connect multiple systems, enabling integrated multi-source control to a single platform, available anywhere.

If you are highlighted on the infographic, contact us today for a no obligation discussion on how we can lower your costs, improve your turnover, increase your efficiency and create sustainability within your business.

Come to think of it, even if you are not on the graphic, chances are we can add you to it!
